Art Unit 1712

1. The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 11 is rejected under 35 U.S.C. § 103(a) as being unpatentable over JP 6-138211, JP '211 in view of WO 9840435, WO '435.

3. The CAPLUS Abstract is used as a guide to the teachings of JP '211. From this Abstract it can be seen that JP '211 teaches a delamination resistant conductive elastomeric composition comprising a polyamide/polyoxyethylene elastomer which is a polyoxypolyolefin type elastomer combined with polystyrene which is a polyolefin and conductive particles of sodium sulfonate salt. JP '211 lacks a teaching of contact pads. It would have been obvious to one of ordinary skill in the art motivated to prepare delamination resistant contact pads to utilize films of the conductive elastomeric composition taught by JP '211 because WO '435 teaches it is known in the art to prepare

electrical connectors from films of conductive elastomers. Film-like connectors are prepared in this way will render the contact pads of the instant claim obvious because contact pads are electrical connectors that are made of conductive films. The Derwent Abstract is used as a guide to the teachings of WO '435.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mr. Aylward whose telephone number is (517)272-1083. The examiner can normally be reached on Monday through Friday from 7:30 to 4:00.
